Seton Hall University School of Health and Medical Sciences, in affiliation with the University of New England College of Osteopathic Medicine, offers a dually-accredited Internal Medicine Residency Program. St. Michael's is one of New Jersey's most respected teaching institutions, and has trained more physicians in New Jersey than any other training institution.

Based at St Michael's Medical Center, the program offers a diverse and broad-based experience in Internal Medicine. Our residency program has a strong emphasis on both specialty medicine and ambulatory medicine training. Residents will have the opportunity to rotate through various state-of-the-art health care centers and hospitals,

including St. Michael's Medical Center and Ambulatory Clinics, Trinitas Hospital and Family Health Center, and JFK Medical Center. Our Residency Program allows Residents to actively manage all aspects of daily patient care including inpatient and outpatient procedures. The curriculum includes daily educational sessions, as well as weekly grand rounds, ambulatory medicine lectures and Board reviews. A primary care clinician-educator, devoted to hands-on teaching, serves as a mentor to each participant. Our Residents also rotate through the Integrated Osteopathic Manipulative Medicine Clinic. The program provides excellent preparation for Residents choosing to practice as primary care Internists or Hospitalists, as well as for those who wish to pursue specialty fellowships.
